From Jheṭ to Bhador (i. e., from the middle of May to the middle of August) they do agricultural work. Then they plough from morning to noon, and later on they work making ricefield-ridges and so on. First they sow millets and jungle corn, later janhę millet, maize, bajra, kŏdę, raher, ghaṅgra, and sutri[1]. After this they sow paddy for transplanting. They hoe the maize (in this the women help them). They do the first ploughing for paddy-planting; thereupon they plough the second time, thereupon plough the third time; they also make ready the ricefield ridges; they make the fields muddy and harrow; then they pull the paddy seedlings out. (To plant the paddy is women's work.)

At this time they sow cotton and tilmiā oilseed[2] in the course of the month of Han (middle of July to middle of August). In Bhador (middle of August to middle of September) they plough the fields for hŏrŏd and surguja[3] and sow these. They harvest the maize. In this work and in hoeing the cotton the women help them. They harvest the iṛi, gundli, kŏdę, and orba millets[4]. In this work also the women assist them. The men thresh.

In the month of Dasāe (middle of September to middle of October) they plough the homestead field where the maize was, and sow mustard seed, and they harvest and thrash janhę millet and the early paddy. In Aghār (middle of November to middle of December) they dig and plane the threshing-floor, and together with the women they harvest the paddy, cut the bajra and tilmiā, cut the raher, pluck the ghaṅgra and sutri, and pull out the hŏrŏd and surguja. The women alone pull out the cotton. When the men have carted all this up to the threshing-floor, they spread it out on this, and joining cattle together they thresh. Having threshed out the seed they throw the straw away, having winnowed the grain they make a heap of it, and having twisted straw-ropes and straw-strings they put it into bundles. The other crops they beat out and put into bundles. Thereupon they cart all to their houses. In the month of Magh (middle of January to middle of February) they harvest the mustard and cut the thatching grass. Now the agricultural work is finished.

Besides all this work the men have all business with the money-lenders, and they pay the rent to the village headman. Men and women help each other to press oil in the oil-press. They do not make oil from the mustard and tilmiā; they sell this. They make oil from several kinds of fruit: kāiṇḍi, bŏru, kujri, bando, beṅga sarjom, oraḍom, leppo[5], korŏj, nim, and others[6].

doubtful whether the concept of monotony has any place in a Santal's mind. His love of a *porob*, or festival, is a byword in the tribe, and it is fostered by many occasions in the Santal calendar as well as by opportunities for "seeing", as they say, Hindu festivals. Some of these gatherings bring together the Santals from great distances. One of the most remarkable in the area takes place on the outskirts of Sarenga at the time of the Lakshmi Puja, at the full moon of the Bengali month of *Kartik* (October-November). This is a Hindu festival, and it is kept with due pomp and ceremony by the family of the local landlord, who is of a mercantile caste. This family built up the celebration by inviting their Santal tenants to come and dance on a field on the village boundary. For many years it has been of more than local significance. Villagers from ten to fifteen miles away turn up in force, and some come from much greater distances. Until the year 1930 they used to dance and sing throughout the night, and on one occasion a missionary counted over five hundred large drums. In the following year a small but determined group of Santal reformers, one of whose aims was to stop their womenfolk from dancing in public, practically brought the gathering to a standstill, but it was revived in 1934 in the modified form in which it continues. At about noon the air begins to resound to the beating of the drums as parties of villagers make their way along the roads and jungle tracks and approach the scene of the gathering. From the four corners of the compass they converge on the open field, men and women in festive attire, the women especially resplendent in new *saris* with gaily designed borders, their hair bedecked with flowers and their arms heavy with ornaments. The drumming intensifies as new parties arrive and more and more lines of dancers are formed. Finally the crescendo of sound from the drums batters on the ear-drums of the bystanders, and even at a distance of four miles it conveys an impression of continuous thunder in the sky. Then the clamour dies away as gradually as it began, and by nine o'clock the field is quiet once again. Since the night dancing was stopped the numbers have diminished slightly. Most of the parties return to their own villages and continue the dance there.

The weeks are enlivened by visits to the local markets. One of the entries in Babulal's record relates to a market day during the early hot weather: "Today was market day. From a very early hour everyone was preparing to go to market. It is very hot at the present time, and if we do not go early the

sand on the pathways becomes unbearably hot for our feet. Pigs were killed at dawn, cut, and the meat was roasted first thing so that it would be ready when the people returned home. The day turned out to be very warm. Some men went into the village of G—— because of their thirst to get a drink of beer, and they said: 'One pice worth of beer from G—— is as good as six pice of beer from that other place.'" The market is the main shopping centre for the villagers. There are cloth stalls and stalls of imported trinkets and ornaments. Potters, weavers, blacksmiths, purveyors of "medicines" and many others display their wares. The Santals may have grain for sale in a good year; they sell fowls and vegetables and buy their salt and cooking oil regularly, with other commodities at need. The market is a great place for the exchange of gossip, for meeting friends and relatives; it is here that many flirtations begin and matches are set in hand.

Nevertheless, the main business of the Santals' life, round which most of their activities centre, is to wrest from the poor soil the greatest possible amount of food. The struggle leaves little time for philosophizing, but they do sometimes crystallize in a phrase some bitter lesson from experience, as when they say: "Rain in the morning, like a friendship that is easily made, does not last." They work as hard as their social obligations allow. There is nothing distinctive in their methods of agriculture, and for generations they have been accustomed to settled cultivation and the use of the plough. The division of labour between men and women, the taboo against women handling the plough, they share with the surrounding culture. They observe the same propitious days and seasons for sowing and reaping as their neighbours. A great authority on the Santals has said:[1] "They are on their way to becoming agriculturalists, but are, as yet, far behind. . . . They have not as yet learnt the need for and the benefits of weeding and manuring, or of changing the crops, and much more. For example, they do not take proper care of their cattle. These are mostly herded by children, who use much of the time for their own games and pleasures. When the paddy is harvested, the cattle are permitted to roam about. A direct result of this is that it is impossible for people to have any crops standing after the middle of December or thereabouts; the cattle would
